Ways of reading minds?

- ⊗ Listening
- ⊗ Reading
- ⊗ Observing

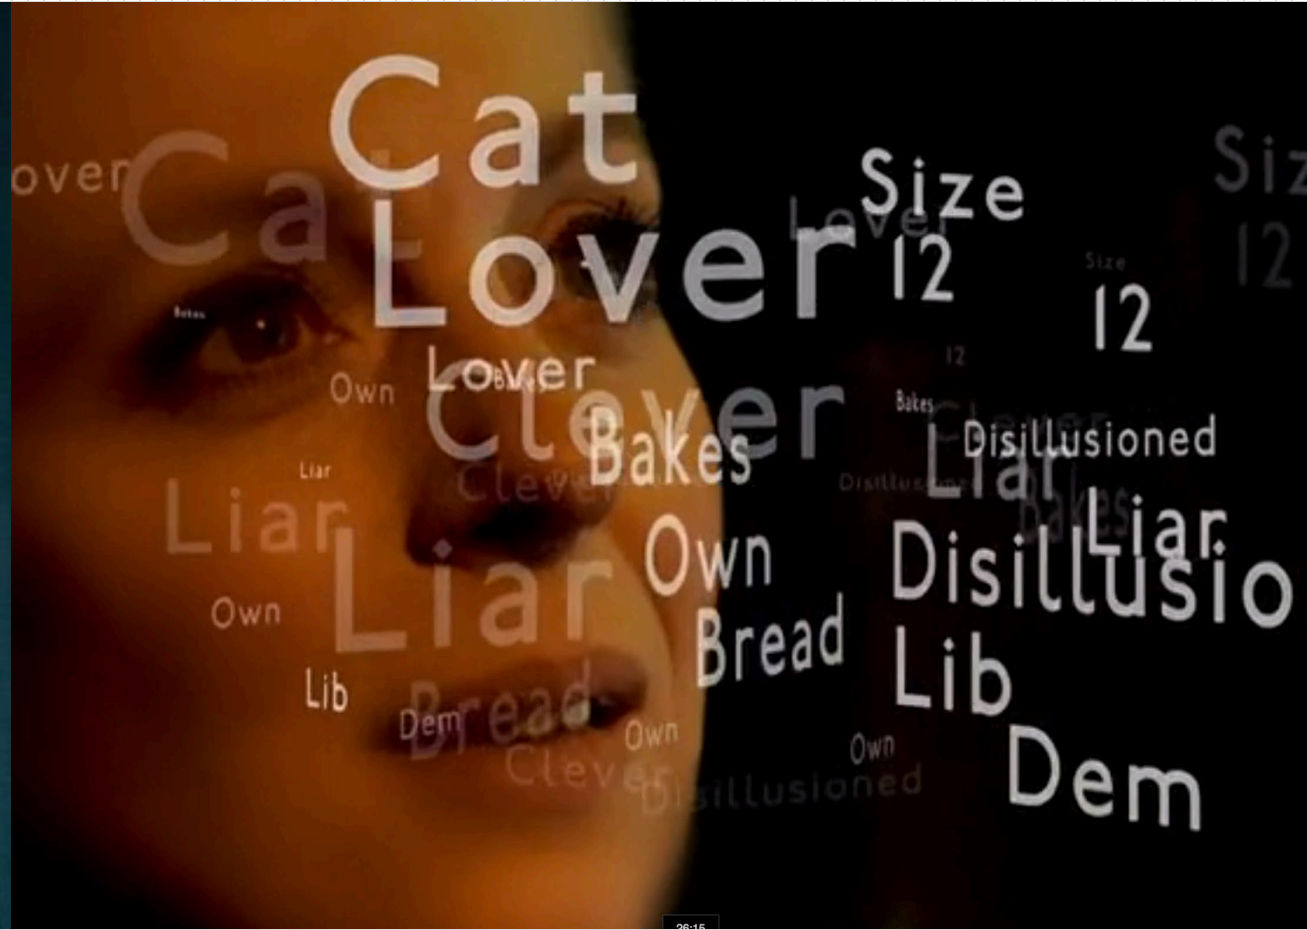

We are natural mind readers.

We are naturally build to learn to read minds. However, our biggest flaw is to “focus our reaction on what we think they will do rather than what they are telling us they will do. “

**“You have to have big ears
and a small mouth.”**

SHERLOCK

BBC

Empaths

“they feel and absorb other people’s emotions and/or physical symptoms because of their high sensitivities.”

Mirror Neuron System

“enables us to instinctively “feel” what another person might be feeling when we see them performing an action. When we observe someone else doing something, the same regions in our brain which would’ve been involved in doing that activity become activated.”

Examples of “Mind Reading”

The Mind Reader Game

Prevent the algorithm from predicting your next move

Guy Satat, Ramesh Raskar
Camera Culture Group

Time left: 10

Bot: 25

You: 16

Artificial Intelligence

- ⊗ Hello Neighbor is a Stealth Horror Game about sneaking into your neighbor's house and figuring out what he's hiding in the basement. Play against an advanced AI that learns from your actions.

“A team from the University of Oregon has built a system that can read people’s thoughts via brain scans, and reconstruct the faces they were visualising in their heads.”

Predictive Infotainment Screen
Predicts which button you will press.

Mid-Air Touch
Finger tips tingle to confirm button selection.

Mind Sense 
Driver concentration monitored through steering wheel sensors.

Wellness Seat 
Analyses driver heart rate and respiration.

30

Forward Monitoring
Scans for possible hazards and gathers traffic sign data.

Haptic Pedals 
Haptic pedals will warn the driver of hazards by pulsing or vibrating the accelerator pedal. Haptic pedal could also alert the driver if the vehicle detects a lack of concentration, and in conjunction with Traffic Signal Recognition (TSR), help ensure correct speed limits are observed.

So what can I do?

Idea 1: I'm gonna read your mind

- ⊗ Okay, not actually me, but the environment will be reading your mind.
- ⊗ With different sensors attached to you, that is reading what you need and is tailoring the environment to it.
- ⊗ For example, reading your heart rate, your movements, and adjusting the visuals and sounds.

Idea 2: Let's read each other's minds

- ⊗ In 2 different rooms in 2 different locations with 2 different participants
- ⊗ Similar to the previous idea, using biosensors attached to each participant, the data gathered from one room is translated to the other room, vice versa.

Thank you!
