

{Planar Model}
Mnemosyne's Scent

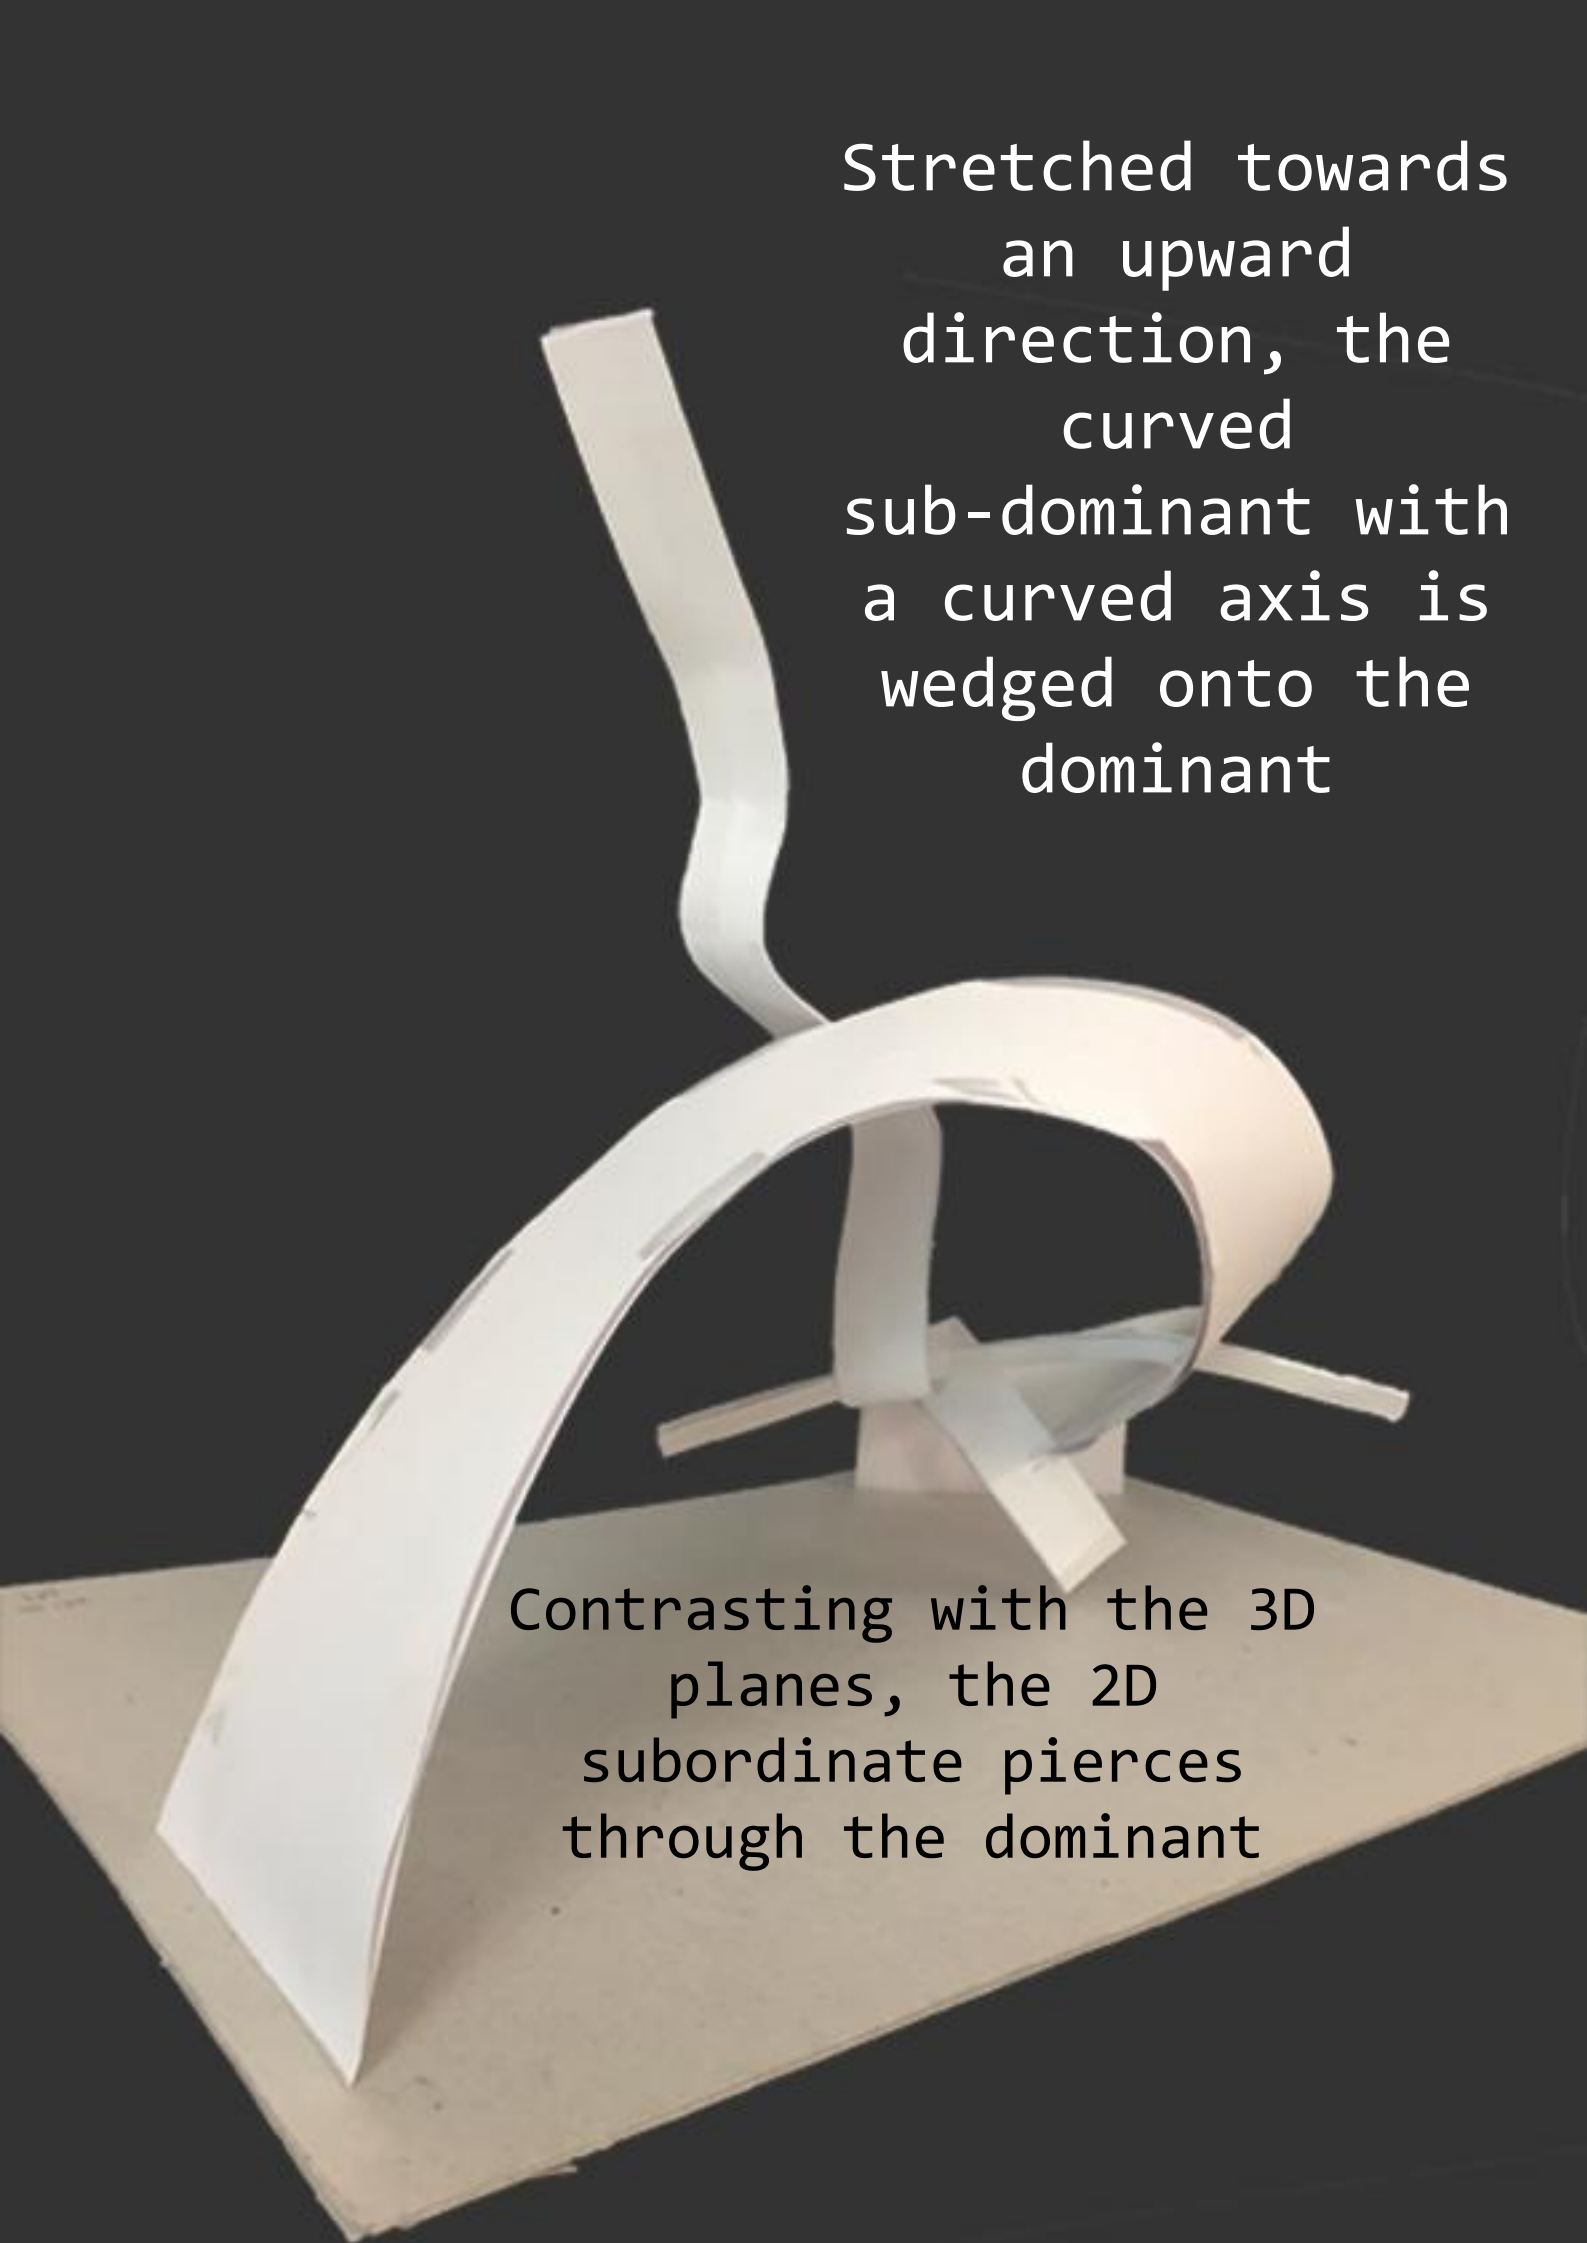

Encompassing both 2D and 3D planes, this planar model shows intertwining of D, SD and SO

Extending across the entire base, the dominant twisted plane with a curved axis has the broadest width out of the 3 strips.

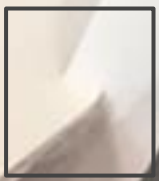

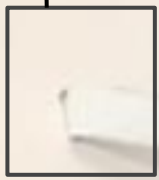

Stretched towards
an upward
direction, the
curved
sub-dominant with
a curved axis is
wedged onto the
dominant

Contrasting with the 3D
planes, the 2D
subordinate pierces
through the dominant

Wedging method

Piercing method
