

## Main Anatomy:

## Walking:

there is no fix pattern in its walking. Each leg may move one after the other in many different variations and it can walk forward, sideways, backwards etc

> Legend: pincers front left leg front right leg back right leg back left leg

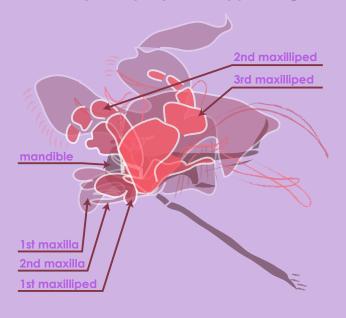

The antenna and antennule are covered in chemosensory hairs that are permeable to a variety of odour molecules; allowing the sense of smell.

Antenna & Antenn

## Mouthparts:

The actual mouth - mandible or 'teeth' is covered by many layers of appendages.

## Eyestalks:

Crabs have compound eyes at the end of their eyestalks which provide 360 panoramic vision. Their eyes can rotate sideways of about 90°.
